Issued by the Registrar-General.

LONDON:

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;
or through any Bookseller.

1928.

Price 1s. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. The live births and deaths for the towns in Tables III., V. and VI. have been provisionally corrected by the exclusion of those not belonging to the town and as far as possible by the inclusion of those belonging to the town but occurring in other areas. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 107 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 107 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 31st March, 1928.

Table VI. shows, for the 155 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st March, 1928.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 31st March, 1928. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIA. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 31st March, 1928.

Note :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE FIRST QUARTER OF 1928. ENGLAND AND WALES.

Births.

The live Births registered in the *First Quarter* of 1928 numbered 168,099 and were 15,345 more than in the preceding Quarter and 973 above the number recorded in the corresponding Quarter of 1927. The illegitimate live Births totalled 7,299, or 141 more than the number shown in the Return for the First Quarter of 1927.

Of these 168,099 live Births 86,382 were males and 81,717 females, giving a proportion of 1,057 males to 1,000 females; the average proportion in the 10 preceding First Quarters was 1,047.

The live Births registered in the Quarter correspond to an annual rate of 17·4 per 1,000 of the estimated mid-year population for the year 1927. This rate is 0·1 per 1000 above that recorded in the corresponding Quarter of 1927.

The number of Stillbirths, the corresponding annual rate per 1,000 population, and the percentage of the total Births registered during the last three Quarters are shown below.

Quarter.	Number.	Annual rate per 1,000 population.	Percentage of total births registered.
Sept., 1927 ...	6,174	0·62	3·6
Dec., " ...	6,397	0·65	4·0
March, 1928 ...	7,028	0·73	4·0

Deaths.

The Deaths (excluding stillbirths) registered numbered 136,315 and were 20,320 more than in the preceding Quarter, and 32,455 less than in the corresponding Quarter of 1927. They included 69,107 males and 67,208 females, corresponding to an annual rate of 14·1 per 1,000 of the estimated population and a proportion of 1,028 males to 1,000 females. The general death-rate was 3·3 per 1,000 below that recorded during the corresponding Quarter of last year.

Influenza was stated to be either a primary or contributory cause of death in 3,155 cases, or 2·31 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 80 per 1,000. This rate was 21 per 1,000 below the average of the 10 preceding First Quarters, and is the lowest rate recorded in any First Quarter.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 107 Great Towns (Table V.) last Quarter were as follows:—

From *measles* 1·01 in Bristol, 1·38 in Warrington, 1·43 in Plymouth and 2·13 in Worcester; from *whooping cough* 0·32 in Worcester and Grimsby, 0·58 in Liverpool and 0·71 in Bootle; from *diphtheria* 0·42 in Tynemouth, 0·49 in East Ham, 0·52 in Canterbury and 0·83 in Walsall; from *influenza* 0·85 in Carlisle, 0·89 in Stockton-on-Tees, 0·90 in West Hartlepool and 0·91 in Merthyr Tydfil.

The highest death-rates per 1,000 Births from *diarrhoea* and *enteritis* among children under two years of age were 21·8 in Salford, 20·4 in Rotherham and 18·8 in Exeter.

Small-pox.

During the Quarter small-pox was mentioned as a cause of death in 36 cases. Of these, 32 have been provisionally classified to small-pox. In addition to the 13 and 6 deaths mentioned in the footnotes to Tables V. and VI. respectively, 2 deaths each have been assigned to Foleshill R.D., Milnrow U.D., South Shields R.D., and one each to East Preston R.D., March U.D., Coventry R.D., East Retford M.B., Fleetwood U.D., Clayton U.D., Selby U.D.

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 31st March, 1928, is given on pp. 24 to 26.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 31,784 as against 37,224 and 43,386 in the First Quarters of 1925 and 1926, and a decrease of 1,644 by excess of Deaths over Births in the First Quarter of 1927.

NOTES ON MARRIAGES.—Fourth Quarter, 1927.

The number of *persons* married in the *Fourth* Quarter of 1927 in England and Wales was 166,666, a decrease of 16,812 over the number in the preceding Quarter, and 23,848 more than that in the corresponding Quarter of 1926. The number corresponds to an annual rate of 16·8 per 1,000 of the estimated mid-year population, and was 2·3 more than that recorded in the corresponding Quarter of 1926.

UNITED KINGDOM AND IRISH FREE STATE.—

Third Quarter, 1927.

In Great Britain and Ireland 209,329 births and 118,227 deaths were registered in the three months ended 30th September, 1927. The natural increase in population was therefore 91,102. The number of persons married was 212,558.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars-General.

METEOROLOGY.***JANUARY.**

January 1928 was mild stormy and extremely wet. Over the greater part of England and Wales there was more than twice the normal precipitation. Not only were monthly totals well in excess of the normal but the number of days on which there was measurable precipitation was decidedly above the normal and in general the month's precipitation was more remarkable for its persistency than for any very heavy daily fall. Flooding was widespread in the Thames Valley early in the month. On January 7th an abnormal rise of the Thames occurred, the tidal reaches of the river attaining their highest level for at least fifty years. Serious flooding accompanied by loss of life occurred in London in some low lying areas bordering on the river. No really cold spell occurred during the month although frost in the screen, which was seldom severe, occurred occasionally at night. Sunshine was recorded on most days while good records were obtained on several days including the 3rd, 11th, 15th, 17th, 19th and 27th. As a result monthly aggregates were mostly about or above the normal. High winds and gales occurred frequently during the month, the gales on the 6th, about the 10th and on the 24th and 25th being severe in northern districts.

FEBRUARY.

February 1928 was mild, the mean temperature being appreciably above the normal in all districts. Precipitation was below the normal in the eastern and south-eastern districts, but in the western and north-western districts there was a well marked excess, notably in parts of Montgomery and Cardigan. Sunshine aggregates were about or above the normal, most of the month's sunshine occurring after the 16th.

Unsettled weather with strong winds and bright periods, frequent rain and, in northern districts, showers of hail and sleet prevailed during the first three days of February. On the 4th relatively warm air from southerly latitudes spread over the British Isles and temperature rose rapidly, maximum temperatures of 50°F. and above being recorded in most districts on the 4th. The weather during the period 4th to the 16th was unsettled with strong winds between south-west and north-west which often attained gale force, notably on the 10th and 11th, changeable temperature and frequent showers. After the 17th the weather became quiet and mainly fine with winds between south and east; day temperatures were mostly above the normal for the time of year while frost occurred at night. Much fog occurred locally. During this period little or no rain was experienced generally, the only rainfall of importance occurring during the night of the 28th-29th and on the 29th when unsettled weather was renewed in the western districts.

MARCH.

March 1928 was on the whole mild but a notable spell of wintry weather extended from about the 8th to the 13th. Day temperatures generally exceeded the normal during the first few days, the 4th being unusually warm in most parts of England; at Richmond (Kew Observatory) and Ross-on-Wye the maximum temperature on the

* Furnished by the Director of the Meteorological Office.

4th, 64°F., exceeded all previous records for the early part of March. Temperature subsequently fell and from the 8th to the 13th a spell of wintry weather with easterly winds, sleet or snow and severe frost was experienced generally. At Richmond a record low maximum for the time of year, 32°F., was recorded on the 11th, just a week after the record high maximum. Screen minima of 20°F. and below were recorded at many places; at Rhayader a screen minimum of 11°F. was recorded on the morning of the 13th and a grass minimum of 7°F. on the morning of the 14th. On the evening of the 10th-11th snow occurred as far south as the Scilly Isles. By the 16th conditions had become mild and during the remainder of the month the weather was unsettled with frequent rain and strong winds to gales between the 19th and 23rd and on the 29th. There were however heavy bright periods notably on the 26th, 28th 30th and 31st. Monthly totals of precipitation were above the normal in the south-western and north-eastern districts and in parts of East Anglia and below the normal elsewhere. Sunshine aggregates were in general below the normal. There was a noteworthy prevalence of winds from an easterly point during the month.

Note.—Some changes have occurred in the form of the Meteorological table Page (VIII.), which have been necessitated by changes in the stations used for the preparation of the data in the table. The following note explains the past and present methods of computation of the data.

Up to the end of 1927 the computation of the deviations from normal of the meteorological elements for the several districts of England and Wales was performed as follows:—A number of stations (normally 10) was selected in each district to represent the conditions over the district as fairly as possible, and the mean values for the month or quarter of the observations from these ten stations were compared with the “normal district values” for the same intervals of time. The “normal district values” were based on records for the standard period 1881–1915, usually from 10 stations in each district. Formerly the stations used for the preparation of current values were the same as those used for the computation of “normal district values,” but this is now not always the case, and in consequence the normal district values may no longer be accurately comparable with the current values from the present stations. As from the beginning of 1928, a revised method has accordingly been brought into use for the computation of deviations from normal and percentage of normal. Five stations have generally been selected in each district to represent the meteorological conditions therein, and the current values for each station have been compared with the normal values for the period 1881–1915 *for that station*, in order to obtain station values of deviations from or percentages of normal. The district values of deviation or percentage are derived as the means of the deviations or percentages for the five stations. These deviations or percentages are largely independent of the particular selection of stations used. The normal district values which are shown on the right of the table are those formerly in use, and as explained above, they are derived in general from records from 10 stations per district for the period 1881–1915. Generalized district values of mean temperature, rainfall, rain days and sunshine, in continuation of those previously published, can be obtained by applying the deviations from or percentages of normal to the corresponding normal values.

ENGLAND and WALES.—VALUES of AIR TEMPERATURE, RAINFALL and SUNSHINE for the FIRST QUARTER of 1928, expressed as deviations from or percentages of the normal values, for the several Districts.

* Excluding non-civilians.

† The populations relate to 1928, except in the case of Belfast, which is the Preliminary Census figure of 1926, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast, by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

‡ Including deaths from small-pox: Darlington, 1; South Shields, 4; Newcastle-upon-Tyne, 1; Aberdeen, 1; Greater London (Southwark), 1.

* For statistics of other Colonial and Foreign Cities during the Fourth Quarter of 1927, see Quarterly Return for period.

† The deaths in this column relate to all ages for Bombay, Madras, Oslo (Christiania), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 3 deaths from Cholera in Bombay, 726 in Calcutta and 83 from Plague in Bombay.

§ Including deaths from Croup in Bombay, Paris, Antwerp, Budapest and Warsaw.

|| The estimated population and deaths refer to the civilian population only.

¶ The registration of Births in Bombay is incomplete.

Adastral House, Kingsway, London, W.C.2; 125, George Street, Edinburgh;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

15, Donegall Square West, Belfast;
or through any Bookseller.

1928.

Price 9d. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. The live births and deaths for the towns in Tables III., V. and VI. have been provisionally corrected by the exclusion of those not belonging to the town and as far as possible by the inclusion of those belonging to the town but occurring in other areas. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 107 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 107 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 30th June, 1928.

Table VI. shows, for the 155 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th June, 1928.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 30th June, 1928. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 30th June, 1928.

Note :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE SECOND QUARTER OF 1928. ENGLAND AND WALES.

Births.

The live Births registered in the *Second* Quarter of 1928 numbered 171,241 and were 3,142 more than in the preceding Quarter and 161 above the number recorded in the corresponding Quarter of 1927. This is the first occasion since 1920 that the births in the second quarter of the year have shown an increase when compared with the number registered in the corresponding quarter of the previous year. This arrest in the rate of decline of the birth-rate may, however, be due in some measure to the increase in the number of marriages solemnized in the year 1927. The illegitimate live Births totalled 7,699, or 168 more than the number shown in the Return for the Second Quarter of 1927.

Of these 171,241 live Births 86,928 were males and 84,313 females, giving a proportion of 1,031 males to 1,000 females; the average proportion in the 10 preceding Second Quarters was 1,046.

The live Births registered in the Quarter correspond to an annual rate of 17·5 per 1,000 of the estimated mid-year population for the year 1927. This provisional rate is equal to that recorded in the corresponding Quarter of 1927.

The number of Stillbirths, the corresponding annual rate per 1,000 population, and the percentage of the total Births registered during the last four Quarters are shown below.

Quarter.		Number.	Annual rate per 1,000 population.	Percentage of total births registered.
Sept., 1927	...	6,174	0·62	3·6
Dec., "	...	6,397	0·65	4·0
March, 1928	...	7,028	0·73	4·0
June "	...	7,099	0·72	4·0

Deaths.

The Deaths (excluding stillbirths) registered numbered 114,748 and were 21,567 less than in the preceding Quarter, but 7,140 more than in the corresponding Quarter of 1927. They correspond to a provisional annual rate of 11·7 per 1,000 of the estimated population and include 59,168 males and 55,580 females, a proportion of 1,065 males to 1,000 females. The general death-rate was 0·7 per 1,000 above that recorded during the corresponding Quarter of last year.

Influenza was stated to be either a primary or contributory cause of death in 2,103 cases, or 1·83 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 60 per 1,000. This rate was 12 per 1,000 below the average of the 10 preceding Second Quarters.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 107 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·23 in Bath; from *measles* 0·51 in Middlesbrough, 0·63 in Worcester, 0·67 in Hendon and 0·83 in Edmonton; from *whooping cough* 0·37 in Newport,

0·41 in Liverpool, 0·47 in Gateshead and 0·57 in Bootle; from *diphtheria* 0·32 in Coventry, 0·33 in Gillingham, 0·34 in Cambridge and 0·37 in Oldham; and from *influenza* 0·60 in Oldham and 0·71 in Southport, Blackburn and Aberdare.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 15·4 in Exeter, 14·6 in Manchester and 13·5 in Blackpool.

Small-pox.

During the Quarter small-pox was mentioned as a cause of death in 19 cases. Of these, 18 have been provisionally classified to small-pox. In addition to the 7 and 4 deaths mentioned in the footnotes to Tables V. and VI. respectively, 1 death each has been assigned to Malling R.D., Thame U.D., Ilfracombe U.D., Lichfield R.D., Keighley R.D., Honley U.D. and Darton U.D.

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 30th June, 1928, is given on pp. 24 to 26.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 56,493 as against 73,646, 67,523 and 63,472 in the Second Quarters of 1925, 1926 and 1927.

NOTES ON MARRIAGES.—First Quarter, 1928.

The number of *persons* married in the *First* Quarter of 1928 in England and Wales was 90,414, a decrease of 76,252 over the number in the preceding Quarter, and 5,296 less than that in the corresponding Quarter of 1927. The number corresponds to an annual rate of 9·3 per 1,000 of the estimated mid-year population, and was 0·6 less than that recorded in the corresponding Quarter of 1927.

UNITED KINGDOM AND IRISH FREE STATE.—

Fourth Quarter, 1927.

In Great Britain and Ireland 196,135 births and 147,016 deaths were registered in the three months ended 31st December, 1927. The natural increase in population was therefore 49,119. The number of persons married was 192,980.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars-General.

METEOROLOGY.***APRIL.**

The weather during April was, on the whole, changeable and showery with considerable fair periods. During the first few days the weather was unsettled; day temperatures were rather below the normal and much rain occurred on the night of the 2nd-3rd, 3rd, 4th and 5th. Meanwhile, under the influence of warm, southerly winds from the western Mediterranean there was a gradual rise in temperature which culminated on the 9th when day temperature exceeded 65°F. in many places, the nights were also mild, that of the 9th-10th being unusually mild, the temperature not falling below 50°F. at several places. Thunderstorms occurred locally on the 10th and 11th. By the 12th the winds had backed to the east, the change being accompanied by a marked fall in temperature, at first in eastern districts and subsequently over the country generally.

Strong winds, reaching gale force at exposed places, and heavy rain occurred in southern districts on the 14th. There were again heavy falls on the 15th and 16th, precipitation occurring in the form of sleet or snow in some places. From the 19th to the 21st, cold northerly winds with bright periods and showers of rain or hail were experienced in all districts. On the 22nd the winds changed to south-west and temperature rose above the normal reaching its highest point on the 26th when temperatures exceeding 70°F. were registered in nearly all districts. Strong winds and rain occurred in the south-west from the 24th to 27th. There were, however, considerable fine periods, abundant sunshine being recorded widely on the 28th and in the west on the 29th and 30th. Monthly mean temperatures were generally above the normal. A decided excess of rainfall occurred in south-eastern districts, but in general monthly totals were below the normal and in the north did not generally exceed 50 per cent. of the normal. Sunshine aggregates were below the normal.

MAY.

Prominent features of the weather of May were its relative dryness, and the prevalence of winds between north and north-east.

In the south-east of England, the Channel Isles and parts of East Anglia and the West Riding of Yorkshire, rainfall totals approximated to or exceeded the normal, but elsewhere there was a deficiency which was most pronounced in central and western districts. Dull and cool weather in eastern districts and mainly quiet and fair weather elsewhere prevailed during the first two days of the month. The period 3rd to 6th was generally fine and warm.

Thunderstorms occurred in many places in the south and south-west on the 3rd, 4th and 5th and were associated in a few places with heavy rain. From the 7th to the 22nd winds were mostly northerly to easterly and temperature on the whole was low, notably about the 9th and from the 16th to 23rd, while severe ground frost occurred in many places during the nights of the 7th, 8th, 9th and 10th. The day maximum temperature of 47°F. recorded at Richmond (Kew Observatory) on the 23rd is the lowest value recorded there in the last ten days of May since 1891. Precipitation which so far had been light and scattered occurred widely from the 14th to 23rd.

* Furnished by the Director of the Meteorological Office.

Good sunshine records, however, continued to be obtained in many districts up to the 11th. After the 24th a decided recovery in temperature took place as southerly winds spread over the British Isles and on the 28th and 29th temperatures in the neighbourhood of 80°F. occurred in a few places in southern England. Meanwhile a large anticyclone to the north of the British Isles was extending southwards and winds became easterly; the weather continued mainly fine with little precipitation but by the 31st had become generally cooler. The mean temperature for the month was somewhat below the normal in the eastern districts and slightly above the normal in the western districts. Sunshine aggregates were mostly below the normal.

JUNE.

The weather during June was mainly unsettled, cool and wet. Fine, warm weather prevailed during the first few days, abundant sunshine being recorded on the 2nd and 3rd while during the day time the temperature rose slightly above 70°F. in a few places on the 3rd and 4th. Meanwhile, with the approach of a depression, conditions deteriorated and subsequently remained generally unsettled throughout the month. Rain fell frequently, particularly in northern and western districts, and was notably heavy between the 6th and 9th and about the 13th and 28th, amongst the largest daily measurements being 49 mm. at Harrogate on the 7th, 47 mm. at Brighton on the 13th, 102 mm. at Festiniog in Merioneth and 110 mm. at Rothwaite, Borrowdale, on the 28th. In many districts of England, mostly in the south-east, the temperature on the 13th rose to about 75°F. or slightly higher, but in Scotland and the northern districts of England easterly winds which had come from northerly latitudes maintained cool conditions, day temperature on the 13th generally not exceeding 55°F. As the depression passed away north-eastwards, an anticyclone to the south-west of the British Isles extended its influence over the country and sunny weather with cool north-westerly winds were experienced from the 15th to the 17th. In England the lowest day readings were experienced generally during this period, slight ground frost occurred locally on several mornings and in a few places some fairly sharp frost was reported on 16th. Unsettled wet weather was renewed on the 18th and persisted until the end of the month with intervals of fine weather, notably on the 19th and 20th, during the period 22nd to 25th and on the 30th. Strong winds reaching gale force locally occurred frequently during the last few days of the period, notably on the 26th when gales were reported from many coastal stations in England and Wales.

Except in some coastal and eastern areas and in parts of Devon and Cornwall where there was in general a light deficiency monthly totals of rainfall were above the normal, the excess being most pronounced in western Wales and in the north and north-west of England where more than twice the normal was recorded. The mean temperature for the month was below the normal in nearly all districts. Monthly aggregates of bright sunshine were below the normal in the south and west; elsewhere they were about or above the normal.

ENGLAND and WALES.—VALUES of AIR TEMPERATURE, RAINFALL and SUNSHINE for the SECOND QUARTER of 1928, expressed as deviations from or percentages of the normal values, for the several Districts.

* Excluding non-civilians.

† The populations relate to 1928, except in the case of Belfast, which is the Preliminary Census figure of 1936, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

‡ As extended 1st April 1928.

|| Including deaths from small-pox: Middlesbrough, 1; Gateshead, 2.

Table VI. — 155 SMALLER TOWNS } POPULATION, BIRTHS, and DEATHS for Quarter
(Adjusted populations 20,000- } ended 30th June, 1928.
50,000 in 1921).

TOWNS.	ESTIMATED POPULATION, Mid. 1927.	LIVE BIRTHS.	STILLBIRTHS.	DEATHS (ex- cluding Still- births).	Deaths of Infants under 1 Year of Age.	Deaths from						
						Enteric Fever.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Diarrhoea and Enteritis under 2 years.

* For statistics of other Colonial and Foreign Cities during the First Quarter of 1928, see Quarterly Return for that period.

† The deaths in this column relate to all ages for Bombay, Madras, Oslo (Christiania), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 1 death from Cholera in Bombay, 17 in Madras and 136 from Plague in Bombay.

§ Including deaths from Croup in Bombay, Paris, Antwerp, Budapest and Warsaw.

¶ The estimated population and deaths refer to the civilian population only.

¶ The registration of Births in Bombay is incomplete.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. The live births and deaths for the towns in Tables III., V. and VI. have been provisionally corrected by the exclusion of those not belonging to the town and as far as possible by the inclusion of those belonging to the town but occurring in other areas. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 107 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 107 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 29th September, 1928.

Table VI. shows, for the 155 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th September, 1928.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 29th September, 1928. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 29th September, 1928.

Note.—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE THIRD QUARTER OF 1928.

ENGLAND AND WALES.

Births.

The live Births registered in the *Third* Quarter of 1928 numbered 165,853 and were 5,388 less than in the preceding Quarter, but 1999 above the number recorded in the corresponding Quarter of 1927. The births registered in this and in the two preceding Quarters of the year are slightly in excess of the numbers recorded in the corresponding Quarters of the previous year. This arrest in the rate of decline of the birth-rate may, however, be due in some measure to the increase in the number of marriages solemnized in the year 1927, the marriage rate for that year being the highest recorded since 1922. This increase in the marriage rate is not being maintained, and it is therefore possible that the births in the fourth Quarter of this year will be below the number in the December Quarter of 1927. The illegitimate live Births totalled 7,395, or 1 more than the number shown in the Return for the Third Quarter of 1927.

Of these 165,853 live Births 84,732 were males and 81,121 females, giving a proportion of 1,045 males to 1,000 females; the average proportion in the 10 preceding Third Quarters was 1,050.

The live Births registered in the Quarter correspond to an annual rate of 16·7 per 1,000 of the estimated mid-year population for the year 1928. This provisional rate is 0·2 above that recorded in the corresponding Quarter of 1927.

The number of Stillbirths, the corresponding annual rate per 1,000 population, and the percentage of the total Births registered during the last five Quarters are shown below.

Quarter.	Number.	Annual rate per 1,000 population.	Percentage of total births registered.
Sept., 1927 ...	6,174	0·62	3·6
Dec. " ...	6,397	0·65	4·0
March, 1928 ...	7,028	0·72	4·0
June " ...	7,099	0·72	4·0
Sept. " ...	6·608	0·67	3·8

Deaths.

The Deaths (excluding stillbirths) registered numbered 93,738 and were 21,010 less than in the preceding Quarter, but 1,500 more than in the corresponding Quarter of 1927. They correspond to a provisional annual rate of 9·4 per 1,000 of the estimated population and include 48,136 males and 45,602 females, a proportion of 1,056 males to 1,000 females. The general death-rate was 0·1 per 1,000 above that recorded during the corresponding Quarter of last year.

Influenza was stated to be either a primary or contributory cause of death in 602 cases, or 0·64 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 51 per 1,000. This rate was 13 per 1,000 below the average of the 10 preceding Third Quarters, and only 1 above that for the corresponding Quarter of last year which is the lowest rate recorded.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 107 Great Towns (Table V.) last Quarter were as follows :—

From *enteric fever* 0·11 in Southend-on-Sea ; from *measles* 0·22 in Newcastle-on-Tyne, 0·25 in Newport (Mon.), 0·26 in Liverpool and 0·33 in Gillingham ; from *whooping cough* 0·28 in Sunderland, 0·33 in Middlesbrough, 0·35 in Gateshead and 0·48 in Doncaster ; from *diphtheria* 0·25 in Halifax and Merthyr Tydfil, 0·32 in Coventry, 0·34 in Luton and 0·35 in East Ham ; from *influenza* 0·26 in Rochdale, 0·28 in Oldham, 0·29 in Aberdare and 0·30 in Gloucester.

The highest death-rates per 1,000 Births from *diarrhœa* and *enteritis* among children under two years of age were 22·8 in Liverpool, 23·8 in Stockton-on-Tees, 25·5 in Nottingham and 37·2 in Middlesbrough.

Special tables relating to summer mortality from *diarrhœa* and *enteritis* are inserted in this Return (Tables IX and X).

Small-pox.

During the Quarter there were no deaths from small-pox.

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 29th September, 1928, is given on pp. 24 and 25.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 72,115 as against 86,781, 84,132 and 71,616 in the Third Quarters of 1925, 1926 and 1927 respectively.

NOTES ON MARRIAGES.—Second Quarter, 1928.

The number of *persons* married in the *Second* Quarter of 1928 in England and Wales was 169,490, an increase of 79,076 over the number in the preceding Quarter, but 436 less than that in the corresponding Quarter of 1927. The number corresponds to an annual rate of 17·3 per 1,000 of the estimated mid-year population, and is equal to that recorded in the corresponding Quarter of 1927.

UNITED KINGDOM AND IRISH FREE STATE.—

First Quarter, 1928.

In Great Britain and Ireland 213,522 births and 173,615 deaths were registered in the three months ended 31st March, 1928. The natural increase in population was therefore 39,907. The number of persons married was 115,432.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars-General.

METEOROLOGY.*

JULY.

Apart from general cool unsettled weather during the first few days and from the 26th to the end of the month, mainly dry, sunny and warm weather prevailed over the greater part of the country.

Twenty successive days without rain were experienced at many places from East Anglia across to the borders of Wales and south-westwards into Devon, amongst the most notable periods of absolute drought being 26 days at Llanthony Lock (Glos.) 22 days at Sheffield, Chatteris (Cambridge), Felsted (Essex) and Melbury (Dorset). Over most of England and Wales, except the north-west, the largest daily falls occurred between the 26th and 30th, but in the north-west the 4th was generally the wettest day—43 mm. at Lancaster, 38 mm. at Aber and 37 mm. at Aberystwyth. Temperature reached its highest point as a rule on the 15th when 91°F was recorded in London (Camden Square), but in many places, especially in the south-west, the warmest days occurred round the 22nd when readings of 90°F. occurred again in the south-east. Excellent sunshine records were obtained on several days, especially in the east and south of England, e.g. 15.5 hr. at Ross-on-Wye on the 14th—a record for that station for July. The same amount was recorded at Jersey on the 12th and at Harrogate on the 15th. At many places in eastern England the month's sunshine aggregate exceeded that in July of the exceptional summer of 1921. On the night of the 26th, rain fell generally in the south and during the remaining days of the month the weather was unsettled. Thunderstorms occurred on the 26th and 27th. Some notably heavy falls towards the end of the month were:—54 mm. at Ventnor on the 27th and 39 mm. at Swansea on the 31st.

AUGUST.

August was mainly fair in the south and unsettled in the north and west but with considerable fair periods. Mean temperatures for the month approximated to the normal. Precipitation in general was above the normal in the north and west and below the normal in the central, southern and eastern districts. Large areas in the north had more than one and a half times the normal. Sunshine aggregates were in general above the normal in the central and eastern districts and below elsewhere.

Apart from heavy rain in southern England on the night of the 3rd to 4th and in the south-east on the 4th cloudy to fine weather prevailed generally, sunshine amounts on the 5th being almost everywhere good, while day temperatures in the neighbourhood of 75°F were recorded inland (78°F at Ross-on-Wye, 76°F at Birmingham, 75°F at Renfrew, and S. Farnborough). Except in the south-east, rain occurred widely on the 6th and 7th. Following a temporary improvement the weather was very unsettled with frequent thunderstorms from the 11th to the 14th; rain fell generally at first but later the precipitation was of a more showery type. A temporary improvement followed, 10 hours or more sunshine being recorded in many districts on the 15th but unsettled weather was renewed on the 19th and maintained until the 29th; heavy falls occurred on the 20th, notably in the north, 22nd, 23rd and from the 25th to the 27th.

* Furnished by the Director of the Meteorological Office.

Amongst the heaviest falls were :—59 mm. at Rounton, 54 mm. at Aspatria and 52 mm. at Burnley on the 20th. Many districts experienced thunderstorms from the 23rd to 29th. There were, however, many bright periods and on several days good sunshine records were obtained ; over a wide area on the 25th, in the south on the 27th and widely on the 28th and 29th. During the last few days of the month the weather was mainly fine and quiet with slight local showers ; over 12 hours sunshine were recorded in several districts on the 30th.

SEPTEMBER.

The weather of September was chiefly remarkable for the excess of sunshine experienced generally but especially in the south and east of England and the general deficiency of rainfall. Temperature was above the normal during the first half of the month and below the normal during the second half, the mean temperature for the month differing only slightly from the normal. The month opened with calm anticyclonic weather which in the east and south-east of England continued with some very high temperatures and only occasional slight rain until the 9th ; maximum temperatures of 80°F and above were recorded locally on the 4th, 5th and 8th. Meanwhile the weather had become unsettled in the north and in many areas rain fell on the 3rd, 4th and 5th and following a temporary improvement again on the 7th. By the 9th the unsettled conditions had extended over the whole country, thunderstorms accompanied by moderately heavy rain occurring in many districts on the 9th. Subsequently conditions improved and another period of anticyclonic weather with much sunshine and high day temperatures was enjoyed over practically the whole country. These settled conditions persisted in the south and east with little change until the 19th, when temperature became lower though the weather continued generally fair and sunny until the 27th. Much mist or fog occurred in the early morning and ground frost at night. There was, however, slight local rain times during this period with heavy falls in the north on the 16th and 17th and a smaller fall in the south on the 24th. From the 27th to the 29th rain was experienced in most districts. Apart from some trifling falls of rain locally in the east coast the 30th was dry and sunny.

‡ Provisional

Table III.—BIRTH-RATE, DEATH-RATE and ANALYSIS of MORTALITY during the last Five Quarters.

(Provisional figures. The rates for England and Wales for the year 1928 have been calculated on populations estimated to the middle of that year, while those for the towns have been calculated on populations estimated to the middle of 1927. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards the groups of towns.)

* Excluding non-civilians.

† The populations relate to 1928, except in the case of Belfast, which is the Preliminary Census figure of 1926, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

‡ As extended 1st April 1928.

Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;
York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;
15, Donegall Square West, Belfast;
or through any Bookseller.

1929.

Price 1s. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. The figures relating to *deaths* for the towns in Tables, III, V, VI, X, XI, XII and XIII have been provisionally corrected by the exclusion of those not belonging to the town and, as far as possible, by the inclusion of those belonging to the town but occurring in other areas; the *live births* and *still-births* have been so corrected in all tables. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 107 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 107 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 29th December, 1928.

Table VI. shows, for the 156 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st December, 1928.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 29th December, 1928. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 29th December, 1928.

Note.—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE FOURTH QUARTER OF 1928.

ENGLAND AND WALES.

Births.

The live Births registered in the *Fourth* Quarter of 1928 numbered 155,669 and were 10,006 less than in the preceding Quarter, but 3103 above the number recorded in the corresponding Quarter of 1927. The births registered in this and in the three preceding Quarters of the year are slightly in excess of the numbers recorded in the corresponding Quarters of the previous year. This arrest in the rate of decline of the birth-rate is doubtless due in some measure to the increase in the number of marriages solemnized in the year 1927, the marriage rate for that year being the highest recorded since 1922. The illegitimate live Births totalled 6677 or 301 more than the number shown in the Return for the Fourth Quarter of 1927.

Of these 155,669 live Births 79,485 were males and 76,184 females, giving a proportion of 1,043 males to 1,000 females; the average proportion in the 10 preceding Fourth Quarters was 1,049.

The live Births registered in the Quarter correspond to an annual rate of 15·7 per 1,000 of the estimated mid-year population for the year 1928. This provisional rate is 0·3 above that recorded in the corresponding Quarter of 1927.

The number of Stillbirths, the corresponding annual rate per 1,000 population, and the percentage of the total Births registered during the last six Quarters are shown below.

Quarter.	Number.	Annual rate per 1,000 population.	Percentage of total births registered.
Sept., 1927	6,198	0·63	3·6
Dec. „	6,388	0·65	4·0
March, 1928	7,077	0·72	4·0
June „	7,126	0·73	4·0
Sept. „	6,617	0·67	3·8
Dec. „	6,747	0·68	4·2

Deaths.

The Deaths (excluding stillbirths) registered numbered 115,639 and were 21,901 more than in the preceding Quarter, but 377 less than in the corresponding Quarter of 1927. They correspond to a provisional annual rate of 11·7 per 1,000 of the estimated population and include 59,240 males and 56,399 females, a proportion of 1,050 males to 1,000 females. The general death-rate was the same as that recorded during the corresponding Quarter of last year.

Influenza was stated to be either a primary or contributory cause of death in 1,727 cases, or 1·49 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 69 per 1,000. This rate was 10 per 1,000 below the average of the 10 preceding Fourth Quarters, and only 1 above that for the corresponding Quarter of last year which is the lowest Fourth Quarter rate recorded.

Urban Mortality.

The highest death-rates from certain epidemic diseases in the 107 Great Towns (Table V.) last quarter were as follows :—

From *measles* 0·32 in Sunderland, 0·38 in Newcastle-on-Tyne, 0·55 in Walsall, and 1·01 in Stockton-on-Tees; from *whooping cough* 0·25 in Preston, 0·29 in South Shields, 0·30 in Stockton-on-Tees, 0·35 in Brentford and Chiswick and 0·39 in Salford; from *diphtheria* 0·36 in Tynemouth, 0·41 in East Ham and 0·50 in Aberdare; from *influenza* 0·40 in Bath and Rochdale, 0·42 in Blackburn and 0·62 in Doncaster.

The highest death-rates per 1,000 births from *diarrhœa and enteritis* among children under two years of age were 24·4 in Cardiff, 24·6 in Sunderland and 25·6 in Stoke-upon-Trent.

Small-pox.

During the Quarter small-pox was mentioned as a cause of death in three cases. These have been provisionally classified to small-pox and assigned to Gateshead C.B., Oswaldtwistle U.D. and Droitwich R.D.

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 29th December, 1928, is given on pp. 24 and 25.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 40,030 as against 40,090, 45,718 and 36,550 in the Fourth Quarters of 1925, 1926 and 1927 respectively.

NOTES ON MARRIAGES.—Third Quarter, 1928.

The number of *persons* married in the *Third* quarter of 1928 in England and Wales was 188,806, an increase of 19,316 over the number in the preceding Quarter and 5,030 more than that in the corresponding quarter of 1927. The number corresponds to an annual rate of 19·0 per 1,000 of the estimated mid-year population, and is 0·4 above that recorded in the corresponding quarter of 1927.

UNITED KINGDOM AND IRISH FREE STATE.—

Second Quarter, 1928.

In Great Britain and Ireland 219,560 live births and 146,806 deaths were registered in the three months ended 30th June, 1928. The natural increase in population was therefore 72,754. The number of persons married was 195,494.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars-General.

SUMMARY 1928.

The Summary relating to the year 1928 giving the principal Tables published up to 1912 in the "Annual Summary," will be found on pages 26-44 of this publication, the Tables being numbered IX-XVI.

ENGLAND AND WALES.

According to the quarterly returns furnished by local registrars, 660,267 live births and 460,440 deaths (excluding stillbirths) were registered in England and Wales in the year 1928. The natural increase of population, by excess of births over deaths, was, therefore 199,827, the average annual increase in the preceding five years having been 243,621. The number of persons married during the year was 605,620.

Provisional rates for England and Wales in 1928 per 1,000 of the estimated population at the middle of the year, were as follows :—

Marriage-rate	15·3
Birth-rate	16·7
Death-rate	11·7

The number of stillbirths per 1,000 total births (including stillbirths) was 40 and infant mortality was 65 per 1,000 live births. The birth-rate was 0·1 above that for 1927 which was the lowest on record ; the death-rate was 0·6 below that for 1927 and the infant mortality was the lowest on record, the previous lowest being 69 for the year 1923.

A provisional statement of the birth-rate and an analysis of the mortality during the year in England and Wales, London, and in the groups of towns is given in Table X ; and Table XI shows the provisional birth-rate, death-rate (from all causes and from various causes), and infant mortality during the year in each of the Metropolitan Boroughs and 107 Great Towns.

METEOROLOGY.***OCTOBER.**

Apart from rather cold weather at the beginning and end of the month and about the 11th, 13th and 22nd, October was mild and very wet except in a few districts in the east and northeast. Bright intervals, however, occurred frequently and in most parts of England monthly aggregates of sunshine were above the normal. During the first few days of the month mainly fair anticyclonic conditions prevailed generally, 10 hours sunshine being recorded in the south and east of England on the 1st and between 9 and 10 hours in many places on the 4th. The period 5th to the 12th was mild, wet and unsettled with frequent heavy falls of rain and intervening bright periods. The mild conditions were temporarily interrupted by cold weather which began in the eastern districts about the 10th and by the 13th had extended to nearly all districts, ground frost occurring widely. Sunny periods however occurred in many districts between the 10th and 15th. Mild and unsettled conditions were renewed in the west on the 14th and spreading eastwards persisted with little intermission until the end of the month. Strong winds and local gales were frequent and some very heavy rain occurred locally at times, notably on the 26th (61 mm. at Petersfield).

NOVEMBER.

November was quiet and rather cold at first with occasional slight rain but from the 10th onwards was unusually mild, wet and stormy.

The weather during the early part of the month was cloudy and rather cold with occasional and, in general, slight precipitation. Day temperatures were mostly moderate to rather low, severe frost being recorded widely on the mornings of the 4th, 5th, 9th and 10th. Much mist and fog occurred from the 4th to the 7th, notably on the 6th. Good sunshine amounts were recorded in many districts on the 9th. By the 10th mild unsettled conditions were general and continued to the end of the month with a brief spell of wintry weather about the 28th. Rain was widespread and frequent, heavy falls occurring widely on the 14th, 15th, 16th and from the 21st to the 23rd. Strong winds with local gales at times were frequently experienced and on the 16th, 23rd and 25th attained considerable violence and occasioned much material damage and loss of life. The unsettled weather was relieved by many bright periods, notably on the 13th, 14th, 17th, 18th, 20th and from the 26th to 28th. Sunshine aggregates for the month were in general above the normal in the central and eastern districts and below the normal elsewhere.

DECEMBER.

The weather during December was very variable with occasional sharp contrasts in temperature from one day to the next and unusually severe frost on the 9th, 14th, 15th and at the end of the month. Anticyclonic conditions prevailed generally during the first few days and the weather was mainly cloudy with light northwesterly to westerly winds, moderate temperatures and slight precipitation. Northerly winds on the 7th caused a marked fall in temperature and in the north and west, bright weather with wintry showers prevailed.

* Furnished by the Director of the Meteorological Office.

The 7th, 8th and 9th were very sunny in many districts, more than 7 hours being recorded on the 7th in the southeast. Meanwhile some heavy rain fell at times in the southwest (4½ mm. at Falmouth on the 10th) and gales occurred on the southwest coasts on the night of the 9th-10th. By the 12th the wind had become easterly and the weather was much colder, unusually severe frost occurring widely on the 14th and 15th (19°F. in the screen and 12°F. on the grass at Winchester, and 21°F. in the screen and 11°F. on the grass at Rhayader on the 15th). Following generally wet weather on the 16th, the 17th was very bright in most places and during the next few days conditions were mainly anticyclonic with much fog on the 18th, 19th and 21st. From the 22nd onwards weather was mainly unsettled with strong winds, local gales and occasional heavy rain, notably in the south on the 27th (62 mm. at Dean Prior and 53 mm. at Princetown and Ashburton). Snow or sleet fell in many districts during the last few days; at Cranwell snow was reported to be lying to a depth of 4 inches on the 30th. The mean temperature for the month was about or moderately below the normal generally. Precipitation, most of which fell during the second half of the month exceeded the normal in the east, southeast and southwest and was below the normal elsewhere. There was an excess of sunshine in the eastern districts.

ENGLAND and WALES.—VALUES of AIR TEMPERATURE, RAINFALL and SUNSHINE for the FOURTH QUARTER of 1928, expressed as deviations from or percentages of the normal values, for the several Districts.

* Excluding non-civilians.

† The populations relate to 1928, except that of Belfast, which is the Census figure of 1926, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

‡ As extended 1st April 1928. § Including one death from small-pox. ¶ As altered 1st October 1928.

* For statistics of other Colonial and Foreign Cities during the Third Quarter of 1928, see Quarterly Return for that period.
† The deaths in this column relate to all ages for Bombay, Madras, Oslo (Christiania), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.
‡ Including 236 deaths from Cholera in Calcutta, 418 in Madras, and 10 in Bombay, and 12 from Plague in Bombay.
§ Including deaths from Cramp in Bombay, Paris, Antwerp, Budapest and Warsaw.
¶ The estimated population and deaths refer to the civilian population only.
‡ The registration of Births in Bombay is incomplete.

* The live births and stillbirths are the net numbers registered in the calendar year after correction for inward and outward transfers. The deaths are the numbers registered without such correction and for London differ from those in Tables XI, XIII and XV.

Table X.—**Birth-rate, Death-rate, and Analysis of Mortality** during the year 1928.

(Provisional figures. The rates for England and Wales have been calculated on a population estimated to the middle of 1928, but those for the towns have been calculated on populations estimated to the middle of 1927. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards London and the groups of towns.)

	RATE PER 1,000 TOTAL POPULATION.		ANNUAL DEATH-RATE PER 1,000 POPULATION.										RATE PER 1,000 BIRTHS.		PERCENTAGE OF TOTAL DEATHS.			
	Live Births	Still-births.	All Causes.	Enteric Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Violence.	Diarrhoea and Enteritis (under Two years).	Total Deaths under One year.	Certified by Registered Medical Practitioners.	Inquest Cases.	Certified by Coroner after P.M.	No Inquest.	Uncertified Causes of Death.

* Excluding non-civilians.

† The populations relate to 1928, except that of Belfast, which is the Census figure of 1926, yearly estimates having been discontinued. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected.

Deaths in Dublin Registration Area, and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar year.

† As extended 1st April 1928. § Deaths from small-pox are as follows:—Middlesbrough 1; Darlington 1; South Shields 5; Gateshead 3; Newcastle-on-Tyne 1; Aberdeen 1; Greater London 1.

Greater London 1. October 1928

* The hours of observation are 9 a.m. and 9 p.m. local time.

† The normals used are obtained from observations extending over 35 years (1831-1915).
Pressure is expressed in millibars (1000 mb. = 29.531 mercury-inches). Wind Force.—The Summary is obtained from the records of a cup anemograph having 5 in. cups and 15 in. arms.

The factor used is 3. Winds above 43 miles per hour are reckoned as gales and winds between 21 and 43 miles per hour as moderate or strong winds. Direction is not tabulated when the speed of the wind is less than 5 miles per hour and winds of less than that velocity are counted as calm.

Table XIV—continued.

1928.	Cloud.	Rain and other forms of Precipitation.		Weather										Wind																
		Precipitation.		Number of days of										Number of Observations at 9 a.m., 3 p.m., and 9 p.m.

† A day is reckoned as "generally clear" if the average of the estimates of the fraction of sky covered by cloud at 9 a.m., 3 p.m., and 9 p.m. is less than .2, and as "generally overcast" if the average is greater than .8. Days persistently cloudless and days persistently overcast refer to the period midnight to midnight.

Table XV.—BIRTHS and DEATHS in LONDON and in certain CITIES in the BRITISH EMPIRE and FOREIGN COUNTRIES,
1928.

Note.—The figures in this table are compiled from the weekly returns.

CITIES.	POPULATION (estimated).*	PRINCIPAL EPIDEMIC DISEASES.														
		BIRTHS (exclud- ing stillborn).	Stillbirths.	Live Birth - rate per 1,000 living.	DEATHS (exclud- ing stillborn).	Death - rate per 1,000 living.	Deaths of Infants under 1 year of age.	Rate per 1,000 Births.	Enteric Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.†	Influenza.	Diarrhoea and Enteritis (under 2 years).**

* These populations relate, as far as possible, to the middle of the year. They differ in some cases from those in Table VII.

† The estimated population which is that for the middle of 1927 and deaths for London refer to the civilian population only.

‡ Including deaths from croup in Bombay, Paris, Antwerp, Budapest and Warsaw.

** The deaths in this column relate to all ages for Bombay, Madras, and Oslo (Christiania), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, and the German cities.

§ Including 245 deaths from plague and 30 from Asiatic cholera in Bombay.

¶ The Registration of Births in Bombay is incomplete.
